

SIRENA × SELENA × GOSX

A request worth following.

One system. Four states. A timeline you can inspect.

Use the arrow keys to advance. Press **M** to pause, scrub
or reverse.

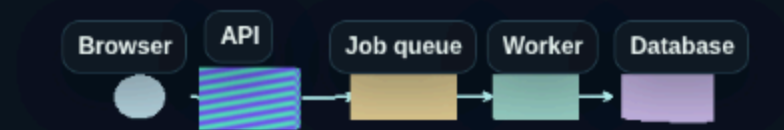

Keep every stage in view.

Browser → API → Queue → Worker → Database

```
// Follow durable work.  
queue.Publish(request)
```

Keep every stage in view.

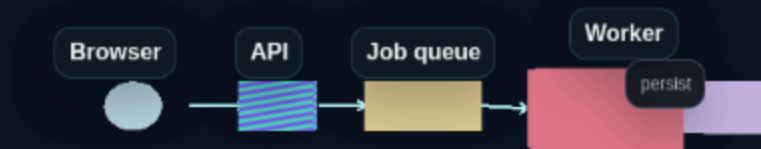

Browser → API → Queue → Worker → Database

```
// Enqueue, then acknowledge.  
queue.Publish(request)  
return Accepted
```

Accepted. The API hands off durable work.

Keep every stage in view.

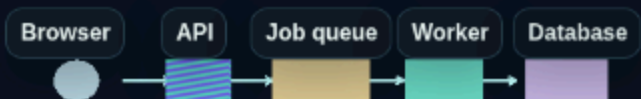

Browser → API → Queue → Worker → Database

```
// Keep the job on failure.  
if worker.Unavailable() {  
    queue.Retain(request)  
}
```

Accepted. The API hands off durable work.

Unavailable. The queue preserves the request.

Keep every stage in view.

Browser → API → Queue → Worker → Database

```
// Retry with an identity.  
job := request.WithKey()  
worker.Process(job)  
queue.Acknowledge(job.ID)
```

Accepted. The API hands off durable work.

Unavailable. The queue preserves the request.

Recovered. The worker resumes without losing the job.
